EXPERIENCE

Wildberries

Feb 2025 – Present

ML Engineer, Horizontal ML Team

Moscow

- Led the voice AI bot project for the inbound mass-hiring call line. The result was a comprehensive service combining ASR, NLP, and TTS technologies, running in real time under heavy load; **5,000+ calls/month, hiring CR 14%** (on par with the human-operator line)
- Led the personalized ranking project for “incentive badges” (on-page prompts nudging users to purchase) in the cart and product page. The ranking model uses 100+ features; **CR +0.9%, GMV +0.2%**
- Developed an LLM-as-a-Judge service (evaluation pipeline) to assess AI services built by other teams: **25+ evaluation criteria, choice of 5 models**, prompt engineering, and turnkey onboarding of customer-facing assistants
- Designed and built an agentic system for warehouse and pickup-point staff, capable of working with internal documentation, web search, and databases, and filing internal support tickets to resolve issues
- Built a RAG-based customer support system in the AI assistant, cutting operator load 6x. Implemented 20+ support scenarios, **85% coverage across inquiry types**

Kuper (ex. SberMarket)

Oct 2024 – Dec 2024

ML Engineer, Search Team

Moscow

- Performed feature engineering (wishlists, product rating) for the search ranking model, automated feature assembly and production training, **speeding up the training pipeline 2.4x**
- Deployed a synonym-dictionary mining pipeline, adding ~1000 clean synonyms every week and yielding **+9% corrected queries**

Jusan Bank

Aug 2023 – Oct 2024

ML Engineer, Search/Financial Teams

Astana

- Developed a two-stage spellchecking pipeline for search: a lightweight stage (dictionary- and heuristics-based) and a heavy stage (seq2seq GRU); **empty-result rate (ERR) –19%**
- Worked on improving the core search models. Added vector search to the L0 candidate-generation model – **recall +21%**. Added RFM features to the L2 ranking model – **nDCG +0.7%, CTR +1.8%**
- Built and maintained a feature store with 100+ features for search and RecSys
- Improved the credit-scoring model by switching to a boosting model with SHAP-based interpretability – **Gini +8%**

VibeLab (ex. ETU Research Center)

Nov 2022 – Feb 2024

Data Science Researcher, part-time

Saint Petersburg

- Developed a RAG system for prospective students and a model forecasting budget-seat fill rates by program for ETU’s admissions campaign
- Built a model to automatically score candidates’ screening-question answers for a partner company

EDUCATION

ITMO University

2026 – 2028

Master’s, AI Talent Hub, Artificial Intelligence

Saint Petersburg

Saint Petersburg Electrotechnical University “ETU”

2022 – 2026

Bachelor’s, Computer Science and Engineering

Saint Petersburg

SKILLS

ML/DS: Python, SQL, pandas, NumPy, PyTorch, TensorFlow, XGBoost, CatBoost, Polars, PySpark, Transformers

NLP/LLM: LLM, RAG, Prompt Engineering, LangChain, LangGraph, Fine-tuning (PEFT/LoRA), Qdrant, FAISS

Production/MLOps: Bash, Git, Docker, k8s, Airflow, ClearML, Grafana, Prometheus, Redis, FastAPI, vLLM
